

INVITATION

Windship Insights - Exploring the potential of Hybrid Sail Cargo Ships

10.11.2026 | 11:00 – 12:00 | Microsoft Teams

The event will take place online via Microsoft Teams. Participation is free of charge.

Can hybrid sail cargo ships become a viable option for more sustainable shipping?

In the next edition of Windship Insights, we will present the findings of a potential study commissioned by MARIKO GmbH as location of the Competence Center GreenShipping Niedersachsen and conducted by MOVE4WARD. The study takes a closer look at market opportunities, economic viability and environmental potential of hybrid sail cargo ships. It identifies promising market segments and cargo groups, examines cost and emissions effects, and assesses both the opportunities and limitations of wind-powered cargo transport.

Join us for insights into the potential role of wind propulsion in the future of maritime logistics!

In cooperation with:

PROGRAMM

- 11:00** **Welcome and introduction**
Felix Agostini, MARIKO GmbH
- 11:10** **Presentation of the study on the potential and possible areas of implementation for hybrid sail cargo ships in sustainable transportation logistics**
Prof. Dr. Jan Ninnemann, MOVE4WARD
- 11:40** **Questions and discussion**
- 12:00** **End of the event**

Registration
